

FLEXIBLE BELT SANDER

©2014 BEC Solution Group - Changes and errors excepted

bSander 75.200

The bSander 75.200 belt sander is intended for safe, fast, and economical grinding of metal segments and casts. The sander may be used for grinding on the front supporting bar as well as for plane grinding on the top board. With the use of suitable grinding belts highly efficient work can be performed. A great advantage is quiet operation without vibrations, simple and fast replacement of grinding belts, clean and safe work.

Thanks to a simple lever system the machine may be adjusted to a required angle position. Another advantage is both-sided extraction of burrs and chips with additional attachments. The machine is designed for machining especially metal products.

Technical data

Motor	3 kW
Belt speed	29m/s
Belt size	2000x75mm
Weight	72kg
Dimensions	1130x700x490mm
